# HEALTHCARE

We are Ankrom Moisan.

---

We are a design firm.

We explore beyond—  
to inspire, to empower,  
to create thriving,  
equitable communities.

Working with us is a journey—  
of inquiry, of continual improvement,  
of evolution, of better outcomes.

We balance buildings and spaces,  
materials and light, circulation  
and market forces, culture and  
collective desire.

By collaborating continually  
across our disciplines and eight  
market sectors, we design  
projects that remain connected to  
each other, their neighborhoods,  
and the people who use them.

# Hands-on design for healing.

We are visionary designers, driven by passion to continuously elevate the end goal: integrated environments that heal. Precisely designing for each process, we create essential healthcare operations that integrate, efficiently and smoothly, to make people better. Our design process is shaped around each client's needs and project requirements, using Lean-inspired methodologies. Bringing together tested expertise from other market sectors, we focus on both patient wellbeing and operational efficiency while balancing technical requirements. Highly responsive teams integrate stakeholder expertise with interior design and architecture to develop solutions that best serve patient paths to wellness. We design for healing.

# LET'S TALK

*...and re-imagine what's possible.*

# HEALTHCARE

## **ELEVATED ACCESSIBILITY**

We aim to elevate access to quality care by addressing the physical, emotional, and societal boundaries that impact equitable options. By working together to identify the needs of each community, we create inclusive and welcoming spaces that focus on holistic healing and encourage health and well-being for all users.

We strive to expand the expertise of our clients by applying our deep knowledge of local regulations, guidelines, and design thinking to every project. We listen to your goals, as well as your needs, for delivering care. Together, we will re-imagine healthcare spaces while providing highly technical, people first, facilities that are ready to support the ever-changing healthcare landscape.

## **EXPANDING ON EXPERTISE**

HEALTHCARE

# ELEVATED ACCESSIBILITY

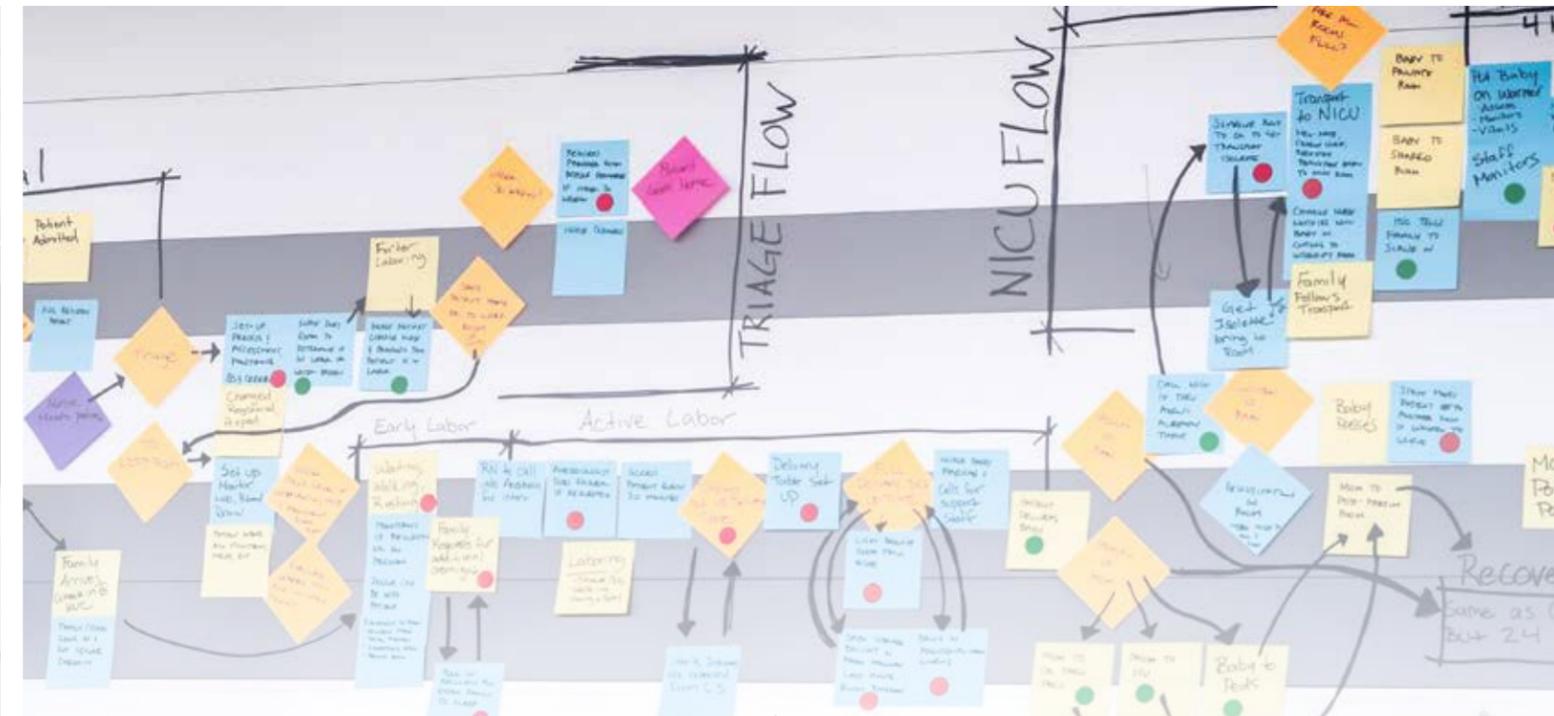

The Pediatric Burn Unit is a unique example of elevating accessibility through design. Constructed in an active pediatric inpatient ward — on a strict budget and schedule — the project remodeled critical support spaces dedicated to the physical rehabilitation of young patients. Our design also leveraged the opportunity to provide a distinctly positive distraction for staff, visitors, and patients alike. Integrated murals created by a local artist, serve as joyful moments during an otherwise difficult and scary time. By engaging many voices, prioritizing user experience, and actively supporting community talent, this project captures the heart and soul of how accessibility can create successful healing environments.

CLIENT	Harborview Medical Center
COMPLETION	2021
SIZE	1,700 sq. ft.

# EXPANDING ON EXPERTISE

The EvergreenHealth Family Maternity Center is an excellent example of leveraging collective expertise and re-imagining. Engaging client stakeholders, project leads, facilities, engineers and contractors from the start generated opportunities for collaboration, learning, and discovery throughout the project. We brought structure to the process and lead through the playbook to carry the project design successfully from kick-off to completion.

# Reimagined results:

# Pivot-pros.

---

**We're agile.** As members of the healthcare team, each of us maintains a primary and secondary focus, allowing a flexibility, nimbleness, and continuity you won't find elsewhere. Obstacles don't stop us, they enlighten us. Each challenge helps us grow.

**We listen.** Our team provides a tailored patient/practitioner first design approach to each client and project. And ensures we're designing to the appropriate target value.

**We connect.** Engaging all stakeholders, we strive to anticipate future outcomes, not design for existing ones.

**We deliver.** Healthcare projects matter! The impacts of space on lives can be profound. We create environments that provide comfort and positive experiences.

# EXPERIENCE

## **DESIGNING TOGETHER.**

---

Diversity grows creativity. Our broad range of expertise allows us to elevate healthcare design. We strive to provide integrated design for quality care at every step, for all members of the community, through four comprehensive project types: inpatient, outpatient, wellness and behavioral health.

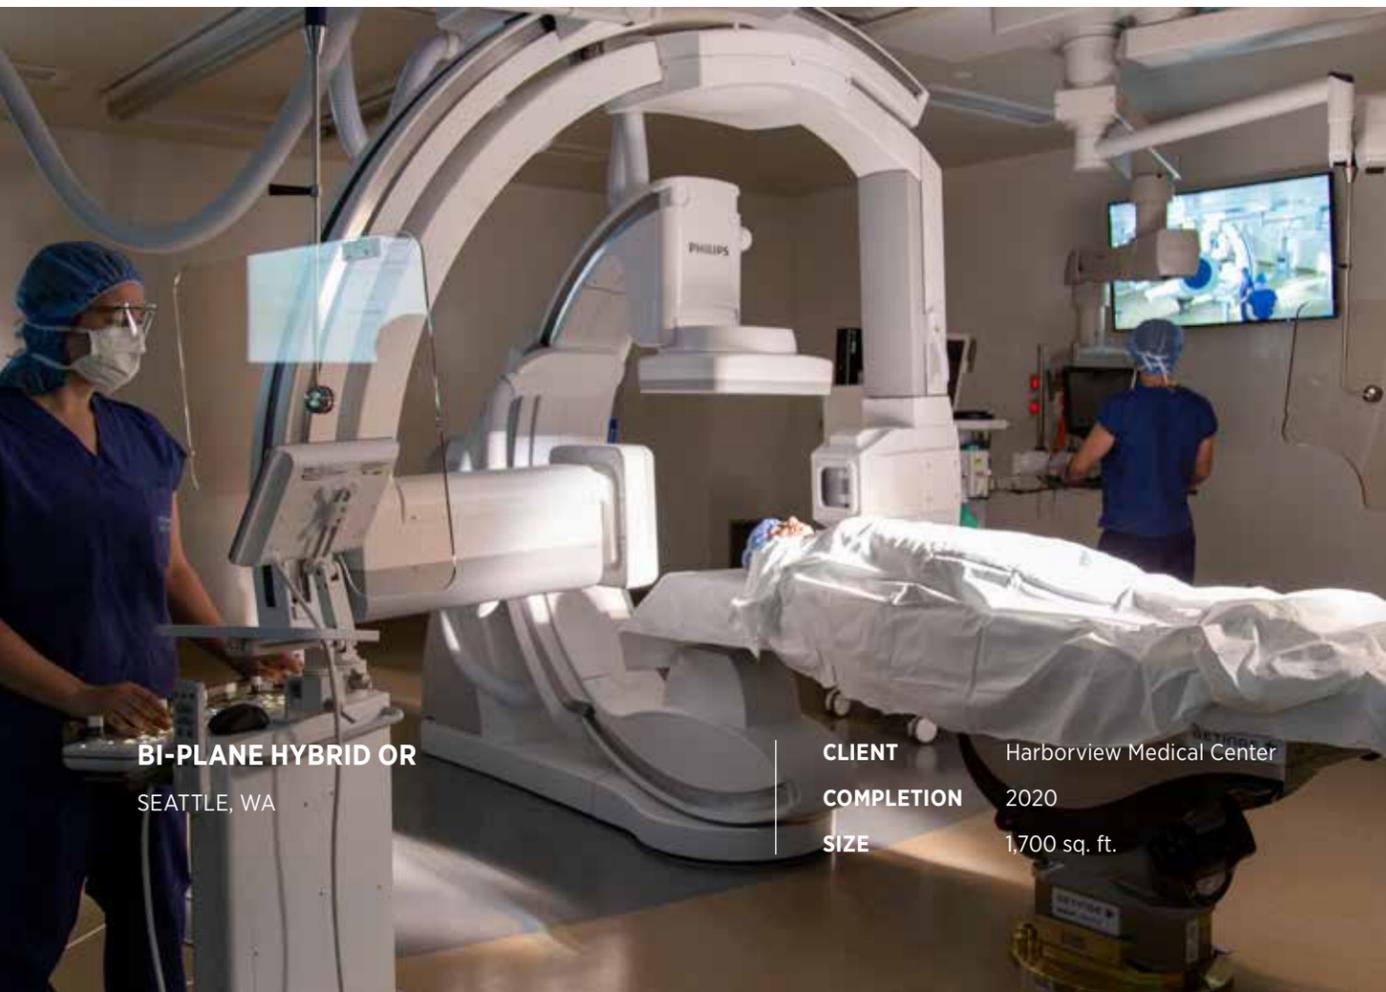

## HEALTHCARE

# Inpatient

## Supporting complex care.

Highly complex, technically intricate, and coordination-heavy — inpatient spaces require design that respects not only the intense technical requirements of the users and equipment, but also acknowledges the occupied, high acuity spaces in which they often reside. From emergency departments to operating rooms, we bring expertise in medical planning, code analysis, and user engagement to create spaces that are intuitive, efficient, and flow well.

The pictured acute care renovation of an existing operating room was undertaken to accommodate a hybrid biplane that facilitates neuro- and cardiac-specific procedures. Located in the heart of a fully active and occupied operating suite, infection control was of tantamount importance. It was essential that construction be completed without shutting down the surrounding operating rooms and associated support spaces. The site was accessed via the mechanical mezzanine, minimizing the amount of travel through the active surgical suite.

General Capabilities

## HEALTHCARE

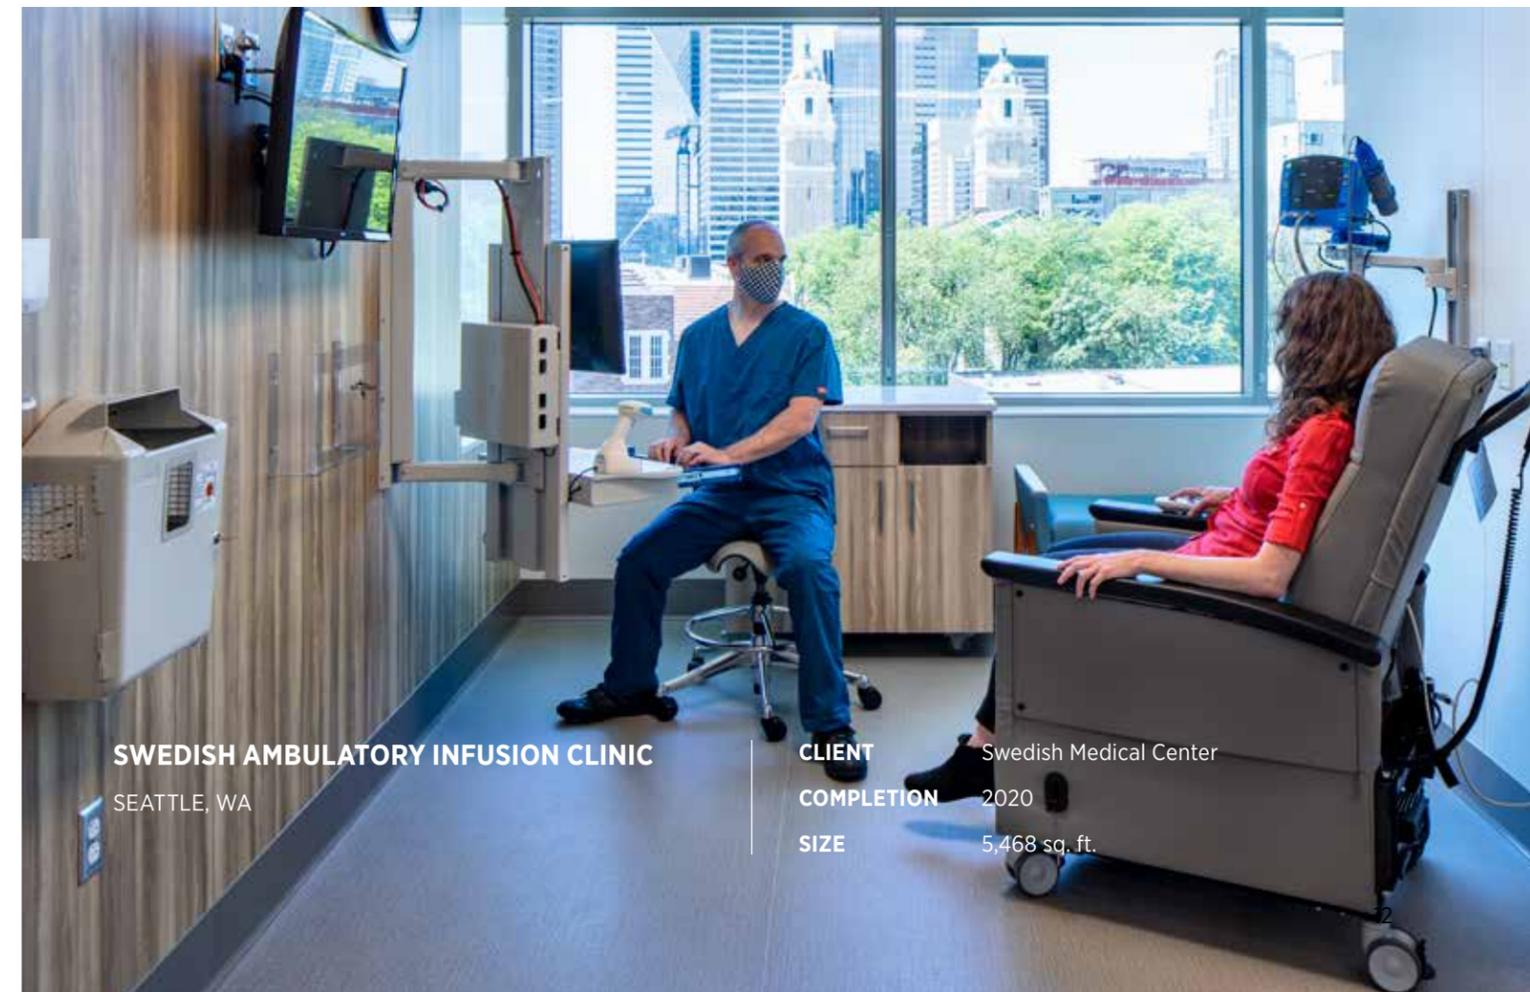

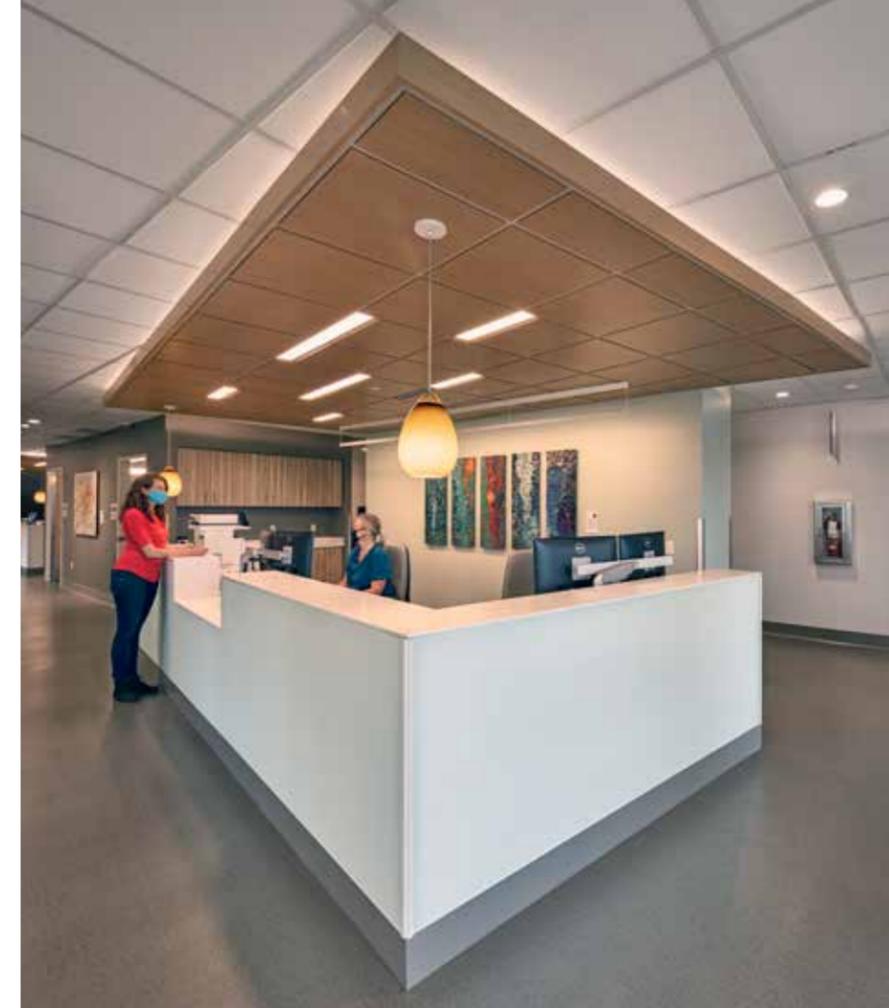

# Outpatient

## Health and hospitality.

We focus on designing welcoming and holistic spaces for patients, visitors, and staff across a broad range of services, from primary care to diagnostics and ambulatory infusion treatment. We deliver highly collaborative projects and innovative brand standards that balance the efficient work flow of staff with the patient experience.

This Ambulatory Infusion Clinic is designed to maximize daylight and views to create a serene, welcoming, space for both patients and visitors. Along with providing patients with unobstructed outdoor views, the open bay design in this project maximizes staff sightlines from inboard work areas. Utilizing an inclusive design process allowed the client, end users, and vendors to all feel heard and helped lead users to a final design reflected their needs and values as caregivers. The resulting space includes 11 infusion bays, two private infusion rooms, two nurses stations, a waiting area, and associated staff areas that are highly customized while also staying within Swedish brand standards. This culminates in a space that provides positive outcomes for all inhabitants.

HEALTHCARE

# Wellness

## Staying healthy.

We design spaces that help people stay healthy, with programs that range from fitness centers to nutritional therapy, counseling, or education. Our focus is community and creating inviting places that honor self-care.

Reed's Crossing Wellness Center strives to blur the line between health and wellness. The projects combines outpatient primary and specialty care clinics, diagnostic imaging and a lab, and urgent care services with physical therapy, fitness, and aquatics functions. It plans to allow maximum access and visibility to health components, which creates opportunities for a broad spectrum of community engagement.

HEALTHCARE

# Behavioral Health

## Psychological healing.

Our behavioral health care designs help patients psychologically heal in safe, secure, and supportive inpatient and outpatient environments. We also strive to actively reduce the social stigmas that often accompany receiving such healthcare. Thus, we also consider community and family needs as well as the needs of psychological healthcare providers.

Compass Health Broadway Campus Phase II combines a network of outpatient and inpatient mental and behavioral health services. This ground-up replacement building seeks to remove the stigmas surround mental health treatment and create a soothing and welcoming atmosphere for all who enter. The architecture, interior design, and medical planning are woven together, increasing views of nature by centering around deeply cut rooftop ravines and outdoor gardens. A prominent landmark in the community, this building will continue to serve as a beacon for those in need of emergency or ongoing care and treatment.

# CROSS-SECTOR

## **INTEGRATED, PERSON-CENTERED DESIGN.**

---

We leverage our expertise and perspectives from other market sectors to think outside the box and elevate our designs. By continuously collaborating across our market sectors, we can design projects that bring meaningful, long term change to communities through integrated person-centered healthcare, support services, housing, and education.

## CCC BLACKBURN CENTER

PORTLAND, OR

# Integrating Housing with Healthcare

---

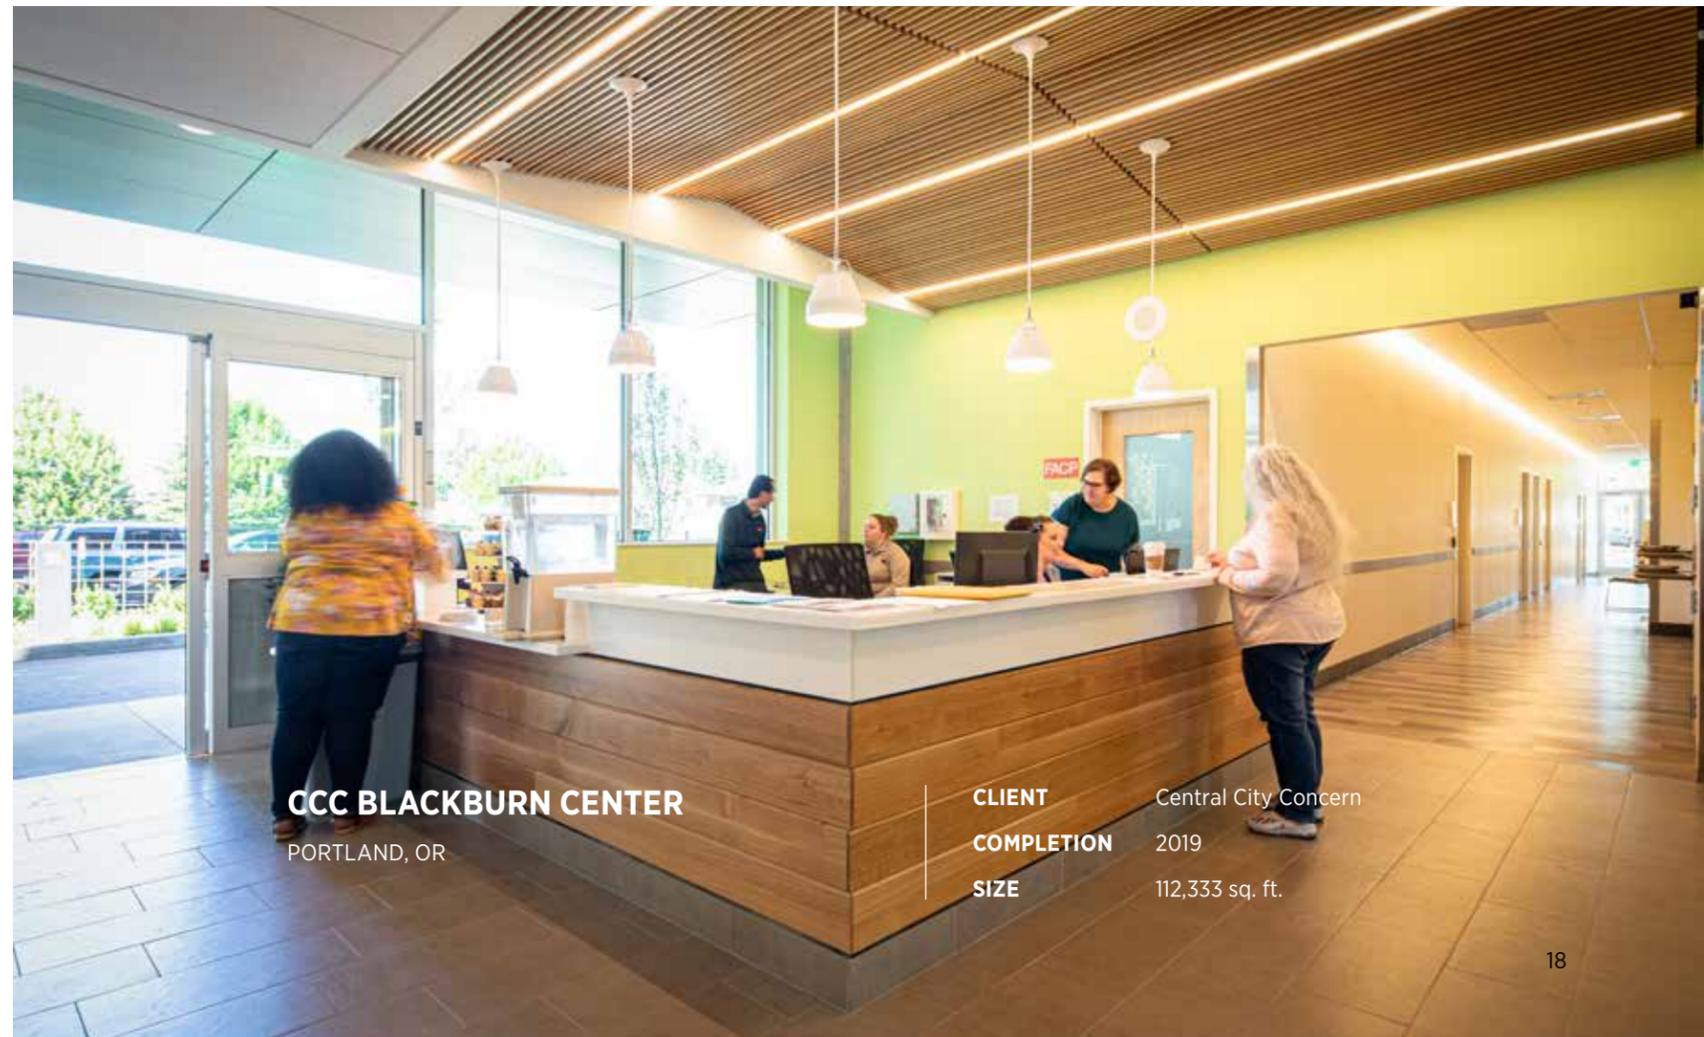

Home—safe, loving, sheltered—is intrinsically connected to our overall health and well-being. From the moment Central City Concern's revolutionary Blackburn Center opened, Portland's most vulnerable had a new, safe home where they could reclaim their lives.

Using "home" as our guiding principle, we designed Blackburn Center to integrate both modern housing and in-house clinical services under one roof. It is one of only five centers in North America to combine healthcare, pharmaceutical services, retail, and supportive and palliative care housing for people experiencing homelessness.

Each level mirrors a person's pathway to healing—from clinical treatment at the ground floor to independent living at the top floors—and supports every stage of recovery. Blackburn Center provides approximately 3,000 patients per year with access to employment services, housing placement, and complementary clinic services.

AIA awarded Blackburn Center its 2018 AIA/AAH Healthcare Design Award, recognizing our contributions to one of the best healthcare centers in the nation.
